Course website or Desire 2 Learn (D2L) course name: [https://d2l.ucalgary.ca/d2l/home/266997](https://d2l.ucalgary.ca/d2l/home/266997)

2. **Course Description:** A survey course of major aspects of environmental chemistry including the natural chemical cycles in the biosphere, geosphere, hydrosphere and atmosphere and the consequences of anthropogenic disturbances to these cycles. Topics discussed will include: Aquatic Chemistry and Water Pollution; Atmospheric Chemistry and its Alteration; Soil Chemistry and the Fate of Pollutants; Toxicological Chemistry; Solid Wastes and Hazardous Wastes.

3. **Recommended Textbook(s):**

4. **Topics Covered:**

   1. **General Concepts:**
   
      **A. Essential chemical concepts**
      
      - Fundamentals (atoms, elements, radicals, states of matter, elemental and chemical bonding, kinetics, gas law, chemical reactions, stoichiometry, units)
      - Organic chemistry (definition, importance of carbon, functional groups and classification of organic compounds by focusing on toxic organic compounds and their environmental impacts)
   
      **B. Biological and Ecological concepts**
      
      - Microbiological processes
      - Nutrient cycles (Global biogeochemical cycles)
      - Limnological concepts and eutrophication
   
   2. **Toxicological Chemistry**
   
      - Fundamentals (toxin modes of entry, bioaccumulation, bioconcentration, biomagnification, $K_{ow}$, $BCF$, fugacity, toxin mode-of-entries, toxic responses, dose-response relationship, $LD_{50}$, $TD_{50}$, $ED_{50}$, NOAEL)
      - Survey of toxic compounds in the anthrosphere: petroleum hydrocarbons, pesticides, PCBs, dioxins, pharmaceutical and personal care products, heavy metals
      - Classification of toxic compounds
   
   3. **Aquatic Chemistry**
   
      - The chemistry of natural waters
      - The pollution and purification of water (drinking water and municipal waste water)
4. Soil Chemistry
   - Introduction to soil chemistry
   - Environmental issues associated with soils

5. Atmospheric Chemistry
   - Stratospheric chemistry
   - Catalytic stratospheric ozone depletion
   - Atmospheric chemistry
   - Ground level air pollution; acid rain, aerosols, greenhouse gas effect

6. Energy
   A. Energy and climate change
   B. Energy and water pollution

7. Solid Wastes and Hazardous Waste
