To avoid IT problems, it is recommended that the students use their U of C account for all course correspondence.

Departmental Office: Room SA 229, Tel: (403) 220-5341, e-mail: uginfo@chem.ucalgary.ca

   Laboratory: Synthesis, photochemistry, molecular modeling

4. Topics Covered and Suggested Readings:

   The first entry below (Jones) is the textbook used in recent years for Chemistry 355 and it will be useful for looking up background material; the other texts are also available from the Bookstore. The second entry (Miller) is the recommended text for Chem 453. It provides coverage of course material except for Huckel MO Theory and Molecular Mechanics. The third entry (Hehre) is optional and provides useful further information about computational methods such as those used in the Molecular Modeling experiments.

The following texts contain supplementary material that is relevant to the course. Students are advised to consult them for additional information and insight into the material presented in lectures. They are available in the Reserve Reading Room of the library as well as in the Bookstore.
