

## **Payroll Taxes in Canada from 1997 to 2007**

*This paper describes the changes in the structure of payroll taxes in Canada and the provinces during the period 1997-2007. We report the average payroll tax per employee, the ratio of payroll tax revenues to GDP and to total government revenues, the composition of payroll tax revenues, and the effective payroll tax rate. The stability of the national effective payroll tax rate, as well as payroll taxes as shares of GDP or of government revenues, during the decade masks substantial changes in the composition of payroll taxes and large differences across provinces. C/QPP contributions overtook EI premiums as the largest source of payroll taxes in 1999. Among the provinces, Quebec has the highest effective payroll tax rate and Alberta the lowest. Payroll taxes across countries in 2007 are also compared using OECD data.*

*JEL:H20 H24*

*Keywords:* payroll taxes; EI premium; C/QPP premium; workers' compensation premiums; provincial payroll taxes; effective payroll tax rates

## I. Introduction

Payroll taxes can be defined as levies on businesses commensurate with the size of their payrolls. Furthermore, payroll taxes are usually used to finance social insurance programs and part of a payroll tax may also be levied on employee earnings. These taxes constitute major sources of government revenue in Canada, raising \$78.5 billion in 2007 or 13.6 percent of total federal and provincial revenues. Payroll taxes feature prominently in policy debates, because of their potential adverse impact on wages and employment, as well as on investment and entrepreneurship.<sup>1</sup> Beach, Picot, and Lin (1996) together with the update in Lin (2001) describe the structure and evolution of payroll taxes from 1961 to 1997. This period precedes the acceleration of contribution rate increases associated with the 1998 reforms to the Canada Pension Plan, and the steady declines in Employment Insurance premiums since the mid 1990s in line with the rate setting procedure prescribed by the *Employment Insurance Act* of 1996. Hence, it seems opportune to examine the trends in payroll taxes for the subsequent decade.

This paper uses the same methodology as the previous authors to characterize, for Canada and the provinces over the period 1997-2007, the average payroll tax per employee, the ratios of payroll taxes to GDP and to federal and provincial government revenues, the effective payroll tax rates, and the composition of payroll taxes. We also compare payroll taxes across countries in 2007 using OECD data.

We find that Canada/Quebec Pension Plan contributions (C/QPP) have replaced Employment Insurance (EI) premiums as the largest component of payroll taxes since 1999, and in 2007 C/QPP premiums account for 53 percent of total payroll taxes in Canada, compared to only 23 percent for EI premiums. This development reflects the very rapid growth in the C/QPP contributions during the period 1997 to 2003 and the continuous decline in the EI component. The

<sup>1</sup>See Kesselman (1994) for a discussion of the economic issues.

changes in C/QPP contributions and EI premiums have, however, been approximately offsetting, resulting in stable ratios of payroll taxes as a percentage of GDP and payroll taxes as a share of federal and provincial government revenues throughout the period 1997-2007. The overall effective payroll tax rate has been about \$12 for every \$100 of wages and salaries in each year. These trends are in contrast to Lin's (2001) findings for trends in the pre-1998 period, where payroll taxes increased substantially and almost continuously between 1980 and 1997 and EI premiums were the largest component except in 1980. In fact, over the decade 1988-1997 the national effective payroll tax rate increased by 3.34 percentage points and averaged 11.03 percent. Over the more recent decade of 1998-2007 the national effective payroll tax rate decreased by 0.67 percentage points and averaged 12.00 percent. Finally, despite the overall stability in payroll tax financial ratios, there has been a marked increase in (inflation-adjusted) average payroll taxes per employee in Canada since 1997. This must reflect increases in productivity, which reduced the growth in the workforce relative to increases in GDP.

Section 2 describes the statutory payroll tax rates from 1997 to 2007. Section 3 explains the data sources used for our calculations of the effective payroll tax rates and for the other descriptive ratios. Section 4 reports our findings on the payroll tax trends in Canada and in each province. Section 5 provides an international comparison for the year 2007. Section 6 summarizes and concludes. An appendix provides our data and the descriptive ratios for each year and province. We provide the data for the extended period of 1980-2007 to facilitate researchers.<sup>2</sup> The appendix also gives the CANSIM table numbers for variables used in the analysis.

<sup>2</sup>For the pre-1998 years our data is identical with Lin (2001), with a few exceptions attributable to revisions of the data by Statistics Canada.

## **II. Statutory Payroll Tax Rates**

There are currently eight payroll taxes in Canada (as we have defined them) and these have existed throughout our period of investigation. They are the Employment Insurance (EI) premiums and the Canada/Quebec Pension Plan (C/QPP) contributions both charged by the federal government; the Workers' Compensation (WC) premiums levied by all the provinces and territories and administered by Workers' Compensation Boards; the Health and Education (H/E) taxes in Newfoundland and Labrador, Quebec, Ontario, and Manitoba; and the employer contributions to vocational training in Quebec. The federal taxes are levied on both employers and employees, while all of the other taxes are levied only on employers. Finally, the Northwest Territories and Nunavut refer to their taxes on employment earnings as payroll taxes, but for our purposes these taxes resemble personal income taxes.<sup>3</sup> As in Lin (2001), we include only the 10 provinces, excluding the territories, in our totals for Canada.

Tables 1 and 2 summarize the EI and CPP contribution rates and the maximum contribution amounts from 1997 to 2008. These rates have changed substantially over the period, as total EI premium rates fell every year and total CPP contribution rates rose each year from 1997 until 2003. Table 3 provides the 2007 payroll tax rates levied by the provinces. These rates remained almost the same since 1997, although the thresholds at which the various rates apply have occasionally been changed.

## **III. Data Sources**

The supplementary labour income (SLI) database of Statistics Canada provides the data on employer EI premiums and C/QPP contributions. The employee portions and the total EI and C/QPP payroll taxes are calculated by applying the

<sup>3</sup>The intent of the NWT and Nunavut tax is to collect revenues on the earnings of non-residents.

TABLE 1—EI CONTRIBUTION RATES AND THE MAXIMUM CONTRIBUTION AMOUNTS (CURENT DOLLARS)

Year	EI premiums per \$100 of insurable earnings			Maximum annual contribution		
	Employee	Employer	Total	Employee	Employer	Total
1997	2.9	4.06	6.96	1131	1583	2714
1998	2.7	3.78	6.48	1053	1474	2527
1999	2.55	3.57	6.12	995	1392	2387
2000	2.4	3.36	5.76	936	1310	2246

TABLE 3—PROVINCIAL HEALTH AND EDUCATION PAYROLL TAXES IN 2007 (AND 2008)

Province (Name of Tax)	Tax Rate (Base: Payroll)	Structure
Newfoundland	2%	payroll >\$1 million
(Health and Post-Secondary Education Tax)		
Quebec	4.26%	payroll > \$5 million
(Health Services Fund)	2.7% to 4.6% <sup>a</sup>	\$1 million < payroll ≤ \$5 million
	2.7%	payroll ≤ \$1 million
Manitoba	2.15% <sup>b</sup>	payroll > \$2.5 million
	4.3% <sup>c</sup>	\$1.25 million ≤ payroll ≤ \$2.5 million
(Health and Post-Secondary Education Tax Levy)		
Ontario	1.95% <sup>d</sup>	payroll > \$400,000
(Employer Health Tax)		
Quebec	1%	payroll > \$1 million
(Employer Contributions to Vocational Training)		

<sup>a</sup>The rate was 4.26% on payrolls regardless of size in 1997.

<sup>b</sup>The rate was 2.25% in 1997.

<sup>c</sup>The first \$1.25 million of the payroll is exempt. The rate was 4.5% in 1997.

<sup>d</sup>The rate ranged between 0.98% and 1.95% in 1997, depending on payroll size.

fixed ratios of employer-to-employee taxes implied by legislation.<sup>4</sup> Data on workers' compensation premiums are also provided by the SLI. Provincial accounts are the source of data on Health/ Post-Secondary Education Tax for Quebec, Manitoba, Ontario and Newfoundland.

The CANSIM database of Statistics Canada provides the data on Gross Domestic Product, Federal and Provincial government revenues, the GDP implicit price index, wages and salaries of employees, and the total number of full-time employees for each province and Canada as a whole.

<sup>4</sup>Employer EI premium are equal to 1.4 times employee EI premiums and employer C/QPP contributions are equal to the employee C/QPP contributions in every year, as reflected in tables 1 and 2.

## IV. Trends in Recent Years

This section reports the payroll tax trends from 1997 to 2007 for Canada and for each province.

### *A. Average Payroll Taxes per Employee*

Figure 1 shows that there has been a large increase in the national average payroll tax per employee from \$3,487 in 1997 to \$5,685 in 2007 (expressed in 2007 dollars). The tax per employee remains highest in Quebec, at \$6,913 per employee in 2007; the lowest is in Saskatchewan, at \$4,390 per employee. The increases in payroll taxes per employee primarily reflect changes in the denominator of the ratio. That is, as will be clear in a moment, the growth in the number of employees in Canada is lower than the growth in GDP, presumably reflecting increases in productivity.

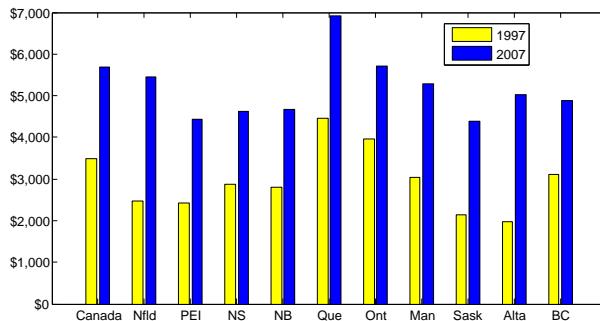

FIGURE 1. AVERAGE PAYROLL TAXES PER EMPLOYEE (2007 DOLLARS)

### *B. Payroll Taxes as Percentage of GDP*

Despite the rapid growth in payroll taxes per employee, Figure 2 shows that payroll taxes as a proportion of GDP decreased slightly for Canada between 1997 and 2007, and only Prince Edward Island and New Brunswick experienced increases. In 2007, total payroll taxes equalled 5.1 percent of GDP for Canada.

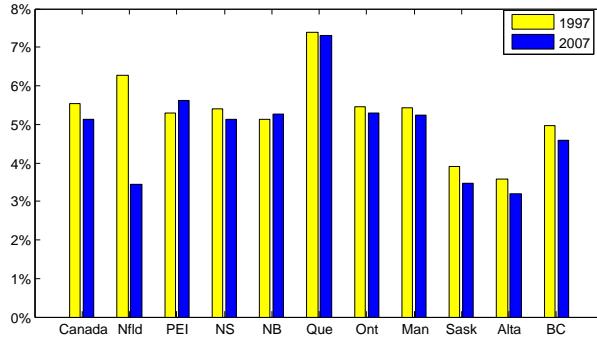

FIGURE 2. PAYROLL TAXES AS A PERCENTAGE OF GDP

### C. Payroll Taxes as Share of Government Revenues

As illustrated in Figure 3, payroll taxes account for 13.6 percent of total government revenues in Canada in 2007, down slightly from 14.0 percent in 1997. There are significant differences across provinces. In 2007, revenues collected from payroll taxes accounted for 27.1 percent of government revenues in Ontario and 25.3 percent in Quebec, compared to the low of 14.2 percent in Newfoundland. From 1997 to 2007, payroll taxes became slightly more important revenue sources in Prince Edward Island, New Brunswick and Alberta, but became relatively less important in the other provinces.<sup>5</sup>

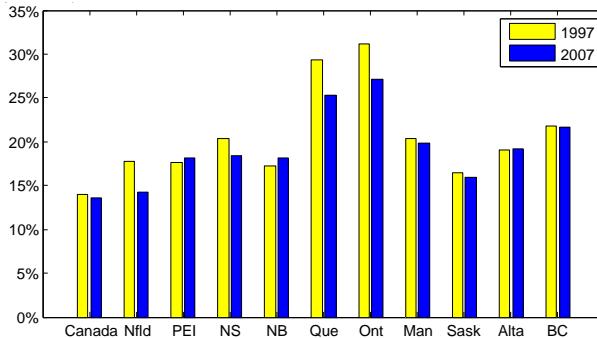

FIGURE 3. PAYROLL TAXES AS A SHARE OF GOVERNMENT REVENUE

<sup>5</sup>For each province, provincial government revenue is used as the denominator, while for Canada as a whole, combined federal and provincial revenue is used as the denominator.

#### D. The Effective Payroll Tax Rate

The effective payroll tax rate is the ratio of total payroll taxes to the tax base, which is composed of the full range of federally taxable personal earnings such as wages, salaries, overtime compensation, vacation pay, commissions, performance bonuses, and fringe benefits except employers' contributions to employees' private pension plans. For the country as a whole, the total effective payroll tax rate was 11.41 percent in 2007 compared to 12.26 percent in 1997. Broadly speaking the national effective payroll tax rate has been quite stable around 12 percent over the period 1997-2007. This contrasts with a large increases in the national effective tax rate in the three previous decades, as reported in Lin (2001). Decompositions of effective payroll tax rates across components as well as across provinces are provided below.

#### DIFFERENTIALS ACROSS COMPONENTS

Figure 4 illustrates clearly the dramatic change in the composition of the federal payroll tax structure. The EI effective tax rate decreased steadily from 4.98 percent in 1997 to 2.58 percent in 2007; the C/QPP effective rate increased from 3.92 percent in 1997 to 6.26 percent in 2003, before falling gradually to reach 6.02 percent in 2007. The H/E/Training tax is the third largest component of payroll taxes (overtaking WC in 1996) at 1.48 percent in 2007.

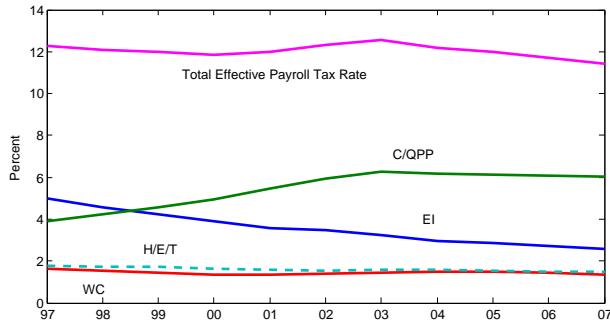

FIGURE 4. EFFECTIVE PAYROLL TAX RATE BY COMPONENT

Figure 5 shows the distribution of payroll taxes across the sources in 2007. C/QPP accounts for 53 percent of total payroll tax revenues (and hence the national effective tax rate) in 2007, with EI, H/E/T and WC accounting for 23 percent, 13 percent and 12 percent respectively.

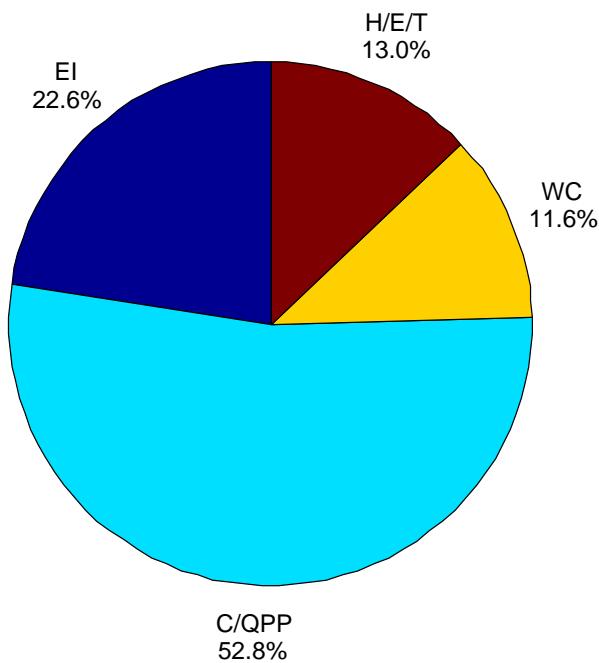

FIGURE 5. DISTRIBUTION OF PAYROLL TAXES AMONG COMPONENTS

#### DIFFERENTIALS AMONG PROVINCES

Figure 6 depicts the overall effective tax rate in each province from 1997 to 2007. Quebec has experienced the highest effective payroll tax rate among the 10 provinces in Canada, with the tax rate over 15 percent each year. In 2007, the second highest tax rate was in Newfoundland at 12.84 percent, followed by Prince Edward Island at 12.65 percent and Manitoba at 11.82 percent. Ever since 1997, Alberta has been the province with the lowest effective payroll tax rate, at 7.66 percent of wages and salaries in 2007.

From 1997 to 2007, New Brunswick experienced the largest growth in the effec-

tive payroll tax rate, which increased by 5.5 percent; next is Prince Edward Island with an increase of 2.6 percent. Alberta has the largest decrease at 11.4 percent, with the remaining provinces decreasing at rates ranging from 2.8 percent to 7.0 percent.

#### *E. International Comparisons of Payroll Taxes*

Tax structures vary considerably across countries. According to OECD data, Canada relies comparatively little on payroll taxes as a source of government revenue. Table 4 shows that in 2007 Canada ranked 25 out of 30 OECD countries in descending order of importance of payroll taxes as a percentage of total tax revenues. Among the G7 countries, France, Germany, and Japan had the highest ratio of payroll taxes to total tax revenues in 2007, at 39.8 percent, 36.6 percent, and 36.4 percent, respectively, compared to 16.4 percent in Canada and an OECD median rate of about 29 percent. Among the 28 countries that use payroll taxes and for which data is available in 1997, only 12 out of 28 had an increase in the share of payroll taxes in total tax revenues between 1997 and 2007, with Canada among them. As a proportion of GDP in 2007 payroll taxes in Canada were 5.5 percent, 23rd on the list in Table 5. Among the G7 countries, France and Germany had the highest ratio of payroll taxes to GDP in 2007, at 17.3 percent and 13.2 percent, respectively, while the rate in Japan was somewhat lower, at 10.3 percent.

### **V. Conclusion**

Payroll taxes per employee in 2007 are much greater than they were in 1997 (in constant 2007 dollars) for Canada as a whole. But payroll taxes as a percentage of GDP declined steadily but slightly after 2003 to reach 5.1 percent in 2007, compared to 5.5 percent in 1997. Similarly, payroll taxes as a share of federal and provincial government revenues trended downward gently after 2003 and are lower in 2007 than in 1997. Broadly speaking, however, the national effective payroll tax

rate has been quite stable during the period 1997-2007 in a close neighbourhood of 12 percent of wages and salaries, in contrast to the large increases in the effective payroll tax rate during the previous decades. The relative stability in payroll tax ratios masks a dramatic change in the composition of payroll taxes. Since 1999, C/QPP contributions have replaced EI premiums as the largest component of payroll taxes. The effective C/QPP tax rate increased from 1997 to 2003, while the effective EI tax rate decreased in every year from 1998 to 2007. As in Lin (2001), our recent data also shows considerable variations in the structure, level, and growth of payroll taxes among the provinces. From an international perspective, Canada relies comparatively little on payroll taxes as a source of tax revenues.

Finally, given the current economic crisis, it can be expected that the downward trend in the effective EI tax rate is likely to be reversed in the post-2007 period and that there will be at least temporary increases in all of the payroll tax ratios.
