| I agree that this paper may be placed at the front of the classroom for pick-up. |  |              |  |  |
| Please initial either <b>YES</b>                                                 |  | or <b>NO</b> |  |  |

**NO CALCULATORS ALLOWED**  
**ANSWER ALL QUESTIONS**  
**SHOW ALL WORK**

**LAST NAME** \_\_\_\_\_ **FIRST NAME** \_\_\_\_\_

[5] 1. Solve the system:

$$\begin{array}{ccccccccc} x & + & 2y & + & 2z & - & 3u & = & -2 \\ x & + & 2y & + & z & & & = & 0 \end{array}$$

[5] 2. Let  $A = \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix}$ . Express  $A$  as a product of elementary matrices.

LAST NAME \_\_\_\_\_ FIRST NAME \_\_\_\_\_

[10] 3. Given that  $A = \begin{bmatrix} -2 & -1 & -4 \\ 3 & 1 & 6 \\ 2 & 2 & 6 \end{bmatrix}$

(a) Find  $\text{adj} A$ .

(b) Compute  $A \cdot \text{adj} A$ .

(c) Find  $\det A$ .

LAST NAME \_\_\_\_\_ FIRST NAME \_\_\_\_\_

- [5] 4. Given that  $A$  is a  $3 \times 3$  matrices such that  $\det A = -2$ . Find  $\det(\text{adj} A + 4A^{-1})$ .

- [5] 5. Consider the system 
$$\begin{array}{rrcr} x & + & y & + & z & = & 1 \\ x & - & y & + & z & = & -1 \\ x & + & 2y & + & 4z & = & 1 \end{array}$$
. Use Crammer's rule to find the value of  $y$ .

**LAST NAME** \_\_\_\_\_ **FIRST NAME** \_\_\_\_\_

[5]

6. A fox hunts in three territories A, B and C. He never hunts in the same territory on two consecutive days. If he hunts in A then he hunts in C the next day. If he hunts in B or C then he is twice likely to hunt in A the next day as in the other territory.

(a) Find the transition matrix P.

(b) If he hunts in A on Monday, what is the probability that he hunts in B the following Thursday?

[5]

7. Let  $A$  denotes a square matrix. Show that the statement: “If  $\text{adj} A = 0$  then  $A = 0$ .” is FALSE.
