XIII. RESEARCH THEMES OF INTEREST

My research has impacted both science policy and patient care and is focused on three broad themes.

1. *Quality of Care:* Many patients, doctors, nurses and health care leaders believe that health care is in need of fundamental change because the care delivered is not the care we should receive. I have performed studies in both the inpatient (*JAMA* 2003, *Crit Care* 2008, *PLoS Med* 2009, *Crit Care Med* 2011, *Imp Science* 2011), and outpatient (*Clin Pharmacol Ther* 2004, *Am J Med* 2005, *IJHCQ* 2008) setting demonstrating that any intervention can have unintended consequences. I have led a research team that developed quality indicators (*Arch Surg* 2010, *Crit Care Med* 2010, *Crit Care Med* 2011, *J Trauma* 2010, *Brit J Sur* 2012, *J Trauma* 2012, *Annals of Surg* 2012, *World J Surg* 2012, *J Clin Epi* 2013, *Annals of Surg* 2014) and patient and family reported outcome measures (*BMC Health Serv Res* 2013, *J Trauma* 2014, *Annals of Surg* 2016) of injury care as well as a standardized mortality ratio of emergency department care (*Ann Emerg Med* 2014, *CJEM* 2015). Our measures have been adopted by national (e.g., Accreditation Canada) and international (e.g., Agency for Health Care Research and Quality) organizations. We are now begun to empirically evaluate the measures developed (*Ann Surg* 2015, *JAMA Surg* 2015, *Ann Surg* 2016, *J Trauma* 2016, *Injury* 2016).
2. *Knowledge Translation:* Health care systems routinely fail to make optimal use of evidence which results in suboptimal patient care (overuse, underuse & misuse of therapies). Large amounts of scientific evidence are generated, but not effectively implemented into patient care³ (evidence-care gap). In direct response to this challenge, we have launched an Alberta Innovates – Health Solutions funded program of work that leverages the recent establishment of Strategic Clinical Networks in Alberta to reassess practices in the daily care of critically ill patients to identify evidence-care gaps and to develop interventions to address deficiencies (*PLoS One* 2015, *BMC Med* 2015, *JAMA IM* 2015). Our goal is to integrate science and innovation with patient care and create a ‘living laboratory’ of ICUs across Alberta Canada that develop, evaluate and implement sustainable, patient-centred and cost-effective best practices. One of the first patient care practices we are targeting for improvement are transitions of care during admission and discharge from the intensive care unit (ICU). Pilot work (*Am J Med* 2011, *Arch Intern Med* 2012, *CHEST* 2014, *Int Care Med* 2015) has suggested that these are amongst the most challenging and high risk transitions of care and that quality of care may be improved with the development of guidelines or tools to standardize these processes. We are currently leading a TVN Centres of Excellence funded Canada wide prospective observational study to describe ICU discharge practices and identify opportunities for intervention. In addition we recently secured a CIHR team grant to extend our work to develop and evaluate a family-partnered pathway for critically ill older patients.
3. *Strategies for Managing Research & Innovation:* Research and innovation are key drivers of societal progress and strategies are needed to optimize their efficiency and effectiveness. Our team has studied financial relationships between researchers and pharmaceutical companies (*NEJM* 1998, *JAMA* 2002, *PLoS Med* 2016) and the results have resulted in the implementation of conflict of interest policies by most major medical journals. We are currently evaluating the reproducibility of clinical research findings in medicine (manuscript under peer review) and plan to develop a decision-rule to provide guidance when seminal publications of innovations warrant immediate implementation and when implementation should be delayed until the results are reproduced.
