

**UNIVERSITY OF CALGARY
FACULTY OF SCIENCE
DEPARTMENT OF CHEMISTRY
COURSE SYLLABUS
SPRING 2019**

1. Course: Environmental Chemistry, CHEM 321.

LEC	DAYS	TIME	ROOM	INSTRUCTOR	OFFICE	EMAIL	OFFICE HOURS
L01	Tu/Th	1:00-3:45 pm	ENE241	Dr. Izadifard	SA258	maryam.izadifard@ucalgary.ca	Tu/Th, 4:00-5:00pm

Course website or Desire 2 Learn (D2L) course name: <https://d2l.ucalgary.ca/d2l/home/266997>

2. Course Description: A survey course of major aspects of environmental chemistry including the natural chemical cycles in the biosphere, geosphere, hydrosphere and atmosphere and the consequences of anthropogenic disturbances to these cycles. Topics discussed will include: Aquatic Chemistry and Water Pollution; Atmospheric Chemistry and its Alteration; Soil Chemistry and the Fate of Pollutants; Toxicological Chemistry; Solid Wastes and Hazardous Wastes.

3. Recommended Textbook(s):

"Environmental Chemistry". 4th or 5th Edition, by Colin Baird and Michael Cann, W. H. Freeman, NY.

"Fundamentals of Environmental and Toxicological Chemistry: Sustainable Science". Fourth Edition, by Stanley Manahan. CRC Press (2013).

"Elements of Environmental Chemistry". 2nd Edition, by Ronald Hites and Jonathan Raff. Wiley.

"Environmental Chemistry: A global perspective". 3rd Edition, by G. W. vanLoon and S. J. Duffy. Oxford University Press.

"Environmental Organic Chemistry". 2nd Edition, Rene P. Schwarzenbach, Philip M. Gschwend and Dieter M. Imboden A John Wiley & Sons Publication.

4. Topics Covered:

1. General Concepts:

A. Essential chemical concepts

- Fundamentals (atoms, elements, radicals, states of matter, elemental and chemical bonding, kinetics, gas law, chemical reactions, stoichiometry, units)
- Organic chemistry (definition, importance of carbon, functional groups and classification of organic compounds by focusing on toxic organic compounds and their environmental impacts)

B. Biological and Ecological concepts

- Microbiological processes
- Nutrient cycles (Global biogeochemical cycles)
- Limnological concepts and eutrophication

2. Toxicological Chemistry

- Fundamentals (toxin modes of entry, bioaccumulation, bioconcentration, biomagnification, K_{ow} , BCF, fugacity, toxin mode-of-entries, toxic responses, dose-response relationship, LD_{50} , TD_{50} , ED_{50} , NOAEL)
- Survey of toxic compounds in the anthrosphere: petroleum hydrocarbons, pesticides, PCBs, dioxins, pharmaceutical and personal care products, heavy metals
- Classification of toxic compounds

3. Aquatic Chemistry

- The chemistry of natural waters
- The pollution and purification of water (drinking water and municipal waste water)

4. Soil Chemistry

- Introduction to soil chemistry
- Environmental issues associated with soils

5. Atmospheric Chemistry

- Stratospheric chemistry
- Catalytic stratospheric ozone depletion
- Atmospheric chemistry
- Ground level air pollution; acid rain, aerosols, greenhouse gas effect

6. Energy

A. Energy and climate change

B. Energy and water pollution

7. Solid Wastes and Hazardous Waste
