TEACHING

1. McGill Courses

Undergraduate

- 1987 - 1990 **Tutor in undergraduate medical course**
McGill University
Introduction to clinical sciences, (20 hours/year)
- 1993 - 2013 **Small Group Leader in Med I**
McGill University: Small Group Teaching. Unit 7.
Host defence and host parasite relationships
(12 hours/year; 14 students/group)
The section of Unit 7 devoted to Immunology is a program intended to introduce students to the terminology and basic concepts of the normal immune response and start an awareness of the nature and consequences of immune dysfunction. The intent of the small group sessions is to ensure that students have an understanding of the terminology and basic concepts and an awareness of the clinical importance of normal and abnormal immune responses and to be excited by this knowledge. The clinical problems reviewed in the small groups are intended to reinforce the immunological mechanisms underlying the clinical manifestations of infection, allergy, and autoimmune disease.

A complete course description is available in Section 5 of my Promotions dossier along with student evaluations.

Graduate

- 1994 **Tutor in Biochemistry 507-503B seminar course**

Economic evaluation of medical technologies
 516-630A (40 hours/year; 15-25 students enrolled) 3 credits. This course provides an in-depth analysis of the tools required to undertake economic evaluations of medical interventions. Topics related to the measurement of costs include: Discounting, down costing overhead costs, incremental analysis, indirect costs, sources of cost data, and the role of simulations in economic evaluations. Topics related to the assessments of benefits include disease-specific and generic measures of quality of life as well as Quality Adjusted Life Years (QALY) and cost-utility analysis. The course also teaches students to critically examine the economic evaluation literature. Practical experience is provided through case studies. RESEARCH

Between 1996 and 2001, I held a career award from the FRSQ (Chercheur Boursier Clinicien Junior 1: 1996-1998 and Chercheur Boursier Clinicien Junior 2: 1998-2001), rating first in both competitions, and I was a CIHR Investigator between 2001 and 2006. I was an FRSQ Chercheur

Nationaux between 2006 and 2011. Since 1995, I have held operating support from numerous national peer-reviewed agencies as Principal Investigator (FRSQ: 1995-1997, 2000-2002; NHRDP: 1997-1999; The Arthritis Society: 1997-2002; 2006-2009; Canadian Arthritis Network: 1999- 2003; CIHR: 2001-2008; NCIC: 2002-2005; AllerGen NCE: 2005-2016) and have published extensively in internationally recognized journals. In 2012, I was recognized by the Royal College of Physicians of Canada for my mentorship skills. My five most significant contributions are discussed below:

1a) Estimating the Medical Costs and Identifying the Predictors of Costs for Patients with Systemic Lupus Erythematosus (SLE). (PI) I published the first economic analyses and identified potentially modifiable predictors of costs. Indirect costs resulting from lost productivity were substantial and patients with the greatest psychosocial distress were likely to incur the highest costs. I therefore conducted a national randomized trial comparing psychosocial interventions as an adjunct to usual care with usual care. There was no differential improvement.

1b) The SLE Tri-Nation Study: Comparing Health Resources and Health Outcomes for Patients with SLE in Canada, the US, and the UK. (PI) I demonstrated that the higher medical costs of the American patients were not associated with less disease damage, a superior quality of life, or improved productivity.

2) Malignancy in SLE. (Co-PI) We assembled the largest-ever SLE cohort and provided the first definitive evidence on the association between SLE and malignancy. Published in the rheumatology journal with the highest impact factor, this paper was selected as one of the top SLE publications of 2005 at the annual meeting of the American College of Rheumatology (ACR). In recognition of this work, I was awarded the 2003 ACR Edmund Dubois lectureship and the 2012 Jeffrey Shiroky Prize for outstanding research and Dr. Bernatsky, my doctoral student, was the recipient of the 2005 Canadian Networks of Centres of Excellence Young Innovator Award and the 2010 Lupus Foundation of America Young Investigator Award. Our data demonstrate an increased risk of malignancy in SLE, particularly for lymphoma.

3) Lymphoma in SLE. (Co-PI) Our data suggest that immunosuppressants are not the primary cause of lymphoma and that the chronic immune stimulation of SLE itself is likely more associated with lymphoma development. We are now evaluating this interplay between immune suppression and stimulation in lymphomagenesis; in so doing, our research will help identify patients at highest risk for lymphoma and provide therapeutic guidance.

4) Canadian Food Allergy Strategic Team (CanFAST) (Co-Leader). I have co-led major legacy projects, involving investigators nationwide, on the causes, management, and policy implications of food allergy within the Allergy, Genes, and Environment Network of Centres of Excellence (AllerGEN NCE). My specific interests relate to the societal burden and causes of food allergy.

5a) Food Allergy: Evaluating the Burden. (PI) I initiated the first longitudinal study on the prevalence of peanut allergy in Canada and showed that it had not increased over 5 years. I conducted the first Canadian population-based study on the prevalence of food allergy and societal attitudes towards food labeling and risks; food allergy is estimated to affect about 8% of Canadians. I have extended this study to vulnerable populations to investigate potential determinants of food allergy and I am now replicating this work to describe temporal trends in prevalence.

5b) Food Allergy: Causes, Diagnosis, and Management. (PI) I have published on the psychological burden of peanut allergy and on the efficacy of school-based anaphylaxis policies. I have assembled nation wide registries of children with peanut, seafood, and sesame allergy and evaluated the rate and management of accidental exposures and role of food labeling on accidental exposure. I have also used the peanut allergy cohort to evaluate potential genetic causes, including mutations in the filaggrin gene, and am now funded by AllerGen to lead the first GWAS in peanut allergy.
