Course Description:

Econ 203 addresses the measurement of economic variables related to the performance of an economy (e.g., national income, inflation, unemployment, and growth) the determinants of these variables, and how these variables are influenced by institutions and government policy. There is a particular focus on understanding economic fluctuations in the short-run and economic growth in the long-run. The objective is to understand how the macroeconomy works, when it works well, when it does not work well, and the role for governments in influencing how it works.

Course Learning Outcomes:

The curriculum for Econ 203 is organized around six broad topic areas. The key principles and models are introduced in the context of addressing these six broad topic areas. The six topic areas are:

- Introduction and Measurement of Economic Activity: Students are introduced to the key macroeconomic variables of interest, national income, unemployment, inflation, interest rates, growth rates, and exchange rates, as well as how these are measured, and the difficulties associated with their measurement and interpretation.
- Real Economy in the Long Run:
 - The determinants of national income in the long run, emphasizing the determinants of economic growth in a market economy and the role of government policies and institutions on the rate of economic growth. The concept and determinants of productivity and its importance for the standard of living.
 - The functioning of the labour market and the determinants of employment and unemployment.
- Money and Prices in the Long Run. The focus is on money, prices, and interest rates in the long run.
 - Defining the roles of money and the characteristics that make something money. Understanding the banking system, fractional reserve banking, and how central monetary authorities can control the money supply. Design of monetary policy and central bank independence.

- The causes, costs, and benefits of inflation.
- The linkage between monetary policy and interest rates.
- Economic Fluctuations and Stabilization: Short Run Macroeconomics. Macroeconomic modelling in the short run: aggregate demand and aggregate supply. Business cycles and the inherent instability of market economies and the potential role for fiscal and monetary policy to stabilize the economy. Linkages between the real and financial sides of the economy, including financial leveraging and asset bubbles and their liquidation. The Philips curve, supply shocks, and expectations. The effects and consequences of government debt and deficits.
- Open economy macro. Foreign exchange rates and markets, balance of payments, and international capital flows. The implications of a small open economy for interest rates, exchange rates, and the level of economic activity, as well as on the effect of government policy.
- Debates in Macroeconomic Policy.
