Course Description:

This is an introductory course in Macroeconomics, which is the study of the economy as a whole. We shall start with some general principles of economics and then move on to topics specific to the study of Macroeconomics. These topics will include the measurement of economic activity, and both the long-term and short-term equilibria of the economy. We shall discuss these equilibria in both closed and open economy settings. We shall also talk about the role of money and prices in the economy.

Course Objectives/Learning Outcomes:

The main objective of this course is to provide students with a broad overview of the fascinating field of Macroeconomics. After completing this course, students will be familiar with the basic concepts of Macroeconomics. They will understand the idea of equilibrium, and how the distinction between the short run and long run helps us better understand the working of the macro economy. They will also know how macroeconomic policies affect the economy.

2. Measurement of Economic Activity (Chapters 5 and 6)
3. The Real Economy in the Long Run (Chapters 7, 8 and 9)

5. Open-Economy Macroeconomics (Chapters 3, 12 and 13)
