### Course Description:

This is the first of the two intermediate-level macro theory courses (the second being ECON 359) required to major in Economics. This course introduces a basic macroeconomic model known as the IS-LM-AD-AS model. The model has numerous applications, some of which we shall discuss in this course. We will also use the model to study the effects of various macroeconomic shocks and policies on the economy.

### Course Learning Outcomes:

After completing this course, students will know

- what the subject matter of macroeconomics is
- what the key macroeconomic variables are and how they are measured
- the short-run equilibrium in a closed economy, which includes:
  - the conditions for equilibrium in the goods market (the IS curve) and the money market (the LM curve)
  - the joint equilibrium in the goods and money markets, and the derivation of the aggregate demand (AD) curve
  - the effects of various shocks and government policies on equilibrium  
the role of expectations
- the medium-run equilibrium in a closed economy, which includes:
  - the conditions for equilibrium in the labor market
  - the labor-market equilibrium and the derivation of the aggregate-supply (AS) curve
  - the effects of various shocks and government policies on equilibrium
  - the role of expectations
  - the discussion of economic crisis within the framework of the IS-LM-AD-AS model
- how the IS-LM-AD-AS model for an open economy (the Mundell-Fleming model) differs from the one for a closed economy

- how to derive the Phillips Curve from the aggregate-supply curve and understand the policy implications of a negatively sloping Phillip's curve
- how inflation and money growth are related in both the short run and the long run`
