Course Description

Students will study and learn how to apply methods of data analysis that are particularly useful in the context of energy economics.

Course Objectives / Learning Outcomes

This is the capstone course for the Applied Energy Economics program. A detailed reading list and assignment / research project specifications will be posted to the course web page.

The assignments will require the use of spreadsheet and econometric software. Note that spreadsheet software alone will not be sufficient to successfully complete the assignments.

Students will complete a research paper in empirical energy economics that will be a major component of the course. Toward the end of the course, students will present their paper in class.

Students are free to use the econometric software of their choice for the assignments and research paper. Various programs are loaded on the machines in the Tri-faculty lab in the basement of SS building; there are options to obtain free software for use on the students own computer. Additional details will be provided in class.

A small number of econometric software-oriented tutorials will be organized and led by the Teaching Assistant.
