Site Technology I: Grading & Landform // EVDL 603 // H(2-2) // Fall 2018

Instructor: Kris Fox // PF 3181, hours by appointment // mk.fox1@ucalgary.ca // 403.220.7428 (email best)

Image from *Civilizing Terrains: Mountains, Mounds and Mesas* by William Moorish

“Landform is perhaps the most fundamental element in landscape architectural design. Natural and artificial topography can be manipulated, modified, or conserved to fully or partially enclose space. Learning to do this with subtlety, sensitivity and originality is an essential design skill.”

Quote from *Form and Fabric in Landscape Architecture* by Catherine Dee

Course Description

Provides a working knowledge of grading, landform and storm water management systems and techniques. Covers fundamentals and advanced technologies including GPS grading and landform manipulation. Through this course, we will explore different ways to visualize, manipulate, design and form the surface of the earth to achieve functional, aesthetic and ecological design solutions through the mastery of the principles and techniques of grading and drainage. We will work at developing sound expertise in grading built elements in the landscape such as pedestrian walks, ramps, steps, roads, walls, berms, flat areas, slopes, drainage swales and stormwater management elements. The approach for each assignment will emphasize an experiential design process approach (aka “learning by doing”) with a balance of in-class tutorials, individual take home assignments and a couple of short field trips on campus and in the northwest of Calgary.

Grading and landform (aka site engineering) will be presented as the technical art of molding and shaping the earth emphasizing that this is one of the most powerful design tools available to the landscape architect. Technical and expressive grading distinguishes landscape architecture from its allied professions, is one of the principal components of form-giving to a site and is a critical component of spatial design. A well-executed site design creates spatial dialogs between all its components that starts with the ground plane and continues with all of the components layered upon it: planting, built landscape elements and structures. This course is the first in a series that will address the technical aspects of design and its changing role as our profession continues to mature; specifically, how to blend an increasing awareness of sustainable building practices with traditional design approaches. In contemporary site design stormwater management, green infrastructure and their catalog of built elements are now a critical component that drives design concepts, form-giving, the site engineering process and materials selection. This dialog of selecting and crafting materials and built elements will start in this course and continue next semester in Site Technology II: Construction and Materials (EVDL 605).

EVDL 603 Site Technology I: Grading & Landform

Objectives

Upon successful completion of the course you should have developed an understanding of the knowledge, skills, and technologies involved in the following:

1. Illustrate that site engineering is an integral part of the design process that addresses both environmental and aesthetic concerns.
2. Interpolate from spot elevation data to produce topographic contour plans.
3. Perform the calculations necessary to manipulate and determine slopes, slope angles, and percentages.
4. Develop grading concepts that respond to specific design goals while maintaining technical site engineering requirements (including earthwork volumes and soil characteristics).
5. Compute storm water runoff volumes and drainage techniques.
6. Demonstrate an understanding of 2D and 3D representation techniques in the context of grading, landform and drainage applications.

Teaching Approach

Through lectures, working through exercises in class, site specific field demonstrations and assignments, we will explore different ways to develop understanding of the relation between design thinking, grading plans and built form. Landscape Architects must be able to generate design ideas in the context of a landscape setting. Understanding grading, landforms, and drainage are critical components in this process.

Readings will be assigned to complement the lectures. Students will be required to complete these readings prior to the related lecture. You may be questioned in class regarding these readings -- come prepared.

The following text is required for the course:

- Strom, Steven, Kurt Nathan and Jake Woland. 2013. Site Engineering for Landscape Architects, 6th Edition. New York: John Wiley & Sons, Inc. <http://site.ebrary.com.ezproxy.lib.ucalgary.ca/lib/ucalgary/detail.action?docID=10650019>

The following text is recommended but not required:

- Woland, Jake. 2013. Site Engineering for Landscape Architects: Workbook, 2nd Edition. New York: John Wiley & Sons, Inc. <http://site.ebrary.com.ezproxy.lib.ucalgary.ca/lib/ucalgary/detail.action?docID=10648912>

Course Bibliography:

EVDL 603 Site Technology I: Grading & Landform

In-Class Exercises will be used systematically to introduce new concepts, techniques and methodologies.

Take Home Assignments will apply the knowledge gained from lectures and in-class exercises to specific site contexts. Take home assignments will be discussed in class and are due at the beginning of class time, **as both a hardcopy and a scanned PDF file** (10:00am collection and/or pin-up). **A scanned PDF file of your marked assignment is due within 48 hours of being handed back.**

Equipment Needed

In addition to the required texts, you will need the drafting and model building tools and supplies from the list below. Please have those materials on hand and available at all times during class studio hours. The final deliverables for Assignment 6 will utilize CAD software.

Drafting supplies

- A calculator with trig functions
- Metric scales (scales ranging from 1:25 to 1:1000 will be used)
- Rolling ruler with rubber, no-slip wheels (quality does matter here / my personal favorite!)
- Mechanical pencils (.3, .5, .7 and .9 recommended). Lead holders also work if kept sharpened.
- Erasers – white plastic best and Erasing Shield – cheap and very helpful for precision erasing
- Drafting brush – optional, but helpful
- Drafting (or painters) tape or dots, (tape is more flexible and can be used for model building)
- Tracing paper and/or vellum: tracing paper for practice, vellum for final assignment drafts (comes in 11x17 pads)
- Triangles: 45/45/90 degree and 30/60/90 degree (with inking edges)
- Circle Templates – Large and small (with inking 'bumps')
- Colored pencils / markers (Prismacolor or equivalent)

Model building supplies

- Cutting mat – 12" x 18" minimum (do not cut on / damage the new studio desks).
- Metal straight edge(s) – with non-slip backing
- Cutting instruments: scissors, heavier duty and precision utility knives (Olfa, Xacto etc) with refill blades (#11 blades or "snap-off" blades)
- Variety of glues (Elmer's, wood, Weldbond, glue stick, Superglue, epoxy etc.)
- Modelling clay (plastilina / oil-based works best: Roma Plastilina "soft-med" is highly recommended)

EVDL 603 Site Technology I: Grading & Landform

Course Schedule

Date	In-Class / Lecture	Reading	Assignment / Deadlines
Sept 10	Introduction: Land<>Form Contours, Landforms & Watersheds	Text, CH 3 Review CH 1-2	Assignment 1 – issued WB, CH 3 in-class
Sept 12	Interpolation and Slope Formula Intro Technical Drawings and Conventions	Text, CH 4 Review CH 15	WB, CH 4 in-class
Sept 17	EVDS Field Trip – Portland		No Class
Sept 19	EVDS Field Trip – Portland		No Class
Sept 24	Slope Formula, Terrace Grading & Swales	Text, CH 5 Pg 90-99	Assignment 1 – DUE Assignment 2 – issued
Sept 26	Grading Process; Drainage and Buildings Work Day	Text, CH 6	
Oct 1	Grading of Roadways Work Day	Text, CH 5, Pg 77-89	Assignment 2 – DUE Assignment 3 – issued WB, CH 5 in-class
Oct 3	Field Trip		
Oct 8	Canadian Thanksgiving		No Class
Oct 10	Grading of Parking Lots, Parking Dimensions Work Day		Assignment 4 – issued WB, CH 5 in-class
Oct 15	EVDS Block Week		No Class
Oct 17	EVDS Block Week		No Class
Oct 22	Drainage and Swales – Reprised		Assignment 3 – DUE
Oct 24	Stairs, Ramps and Walls Accessibility Guides (AB, BC, ADA / LARE)	Review Guides Text, CH 6	Assignment 4 – DUE Assignment 5 – issued

EVDL 603 Site Technology I: Grading & Landform

Date	In-Class / Lecture	Reading	Assignment / Deadlines
Oct 29	Stairs / Ramps Work Day		
Oct 31	Comprehensive Grading Design Project Intro and site walk (on campus) & Work Day		Assignment 6 – issued
Nov 5	Storm Water Management Design Principles Storm Water Management Built Elements	Text, CH 9 & 10 LID Manual	Assignment 5 – DUE
Nov 7	Assignment 6 progress presentations		Assignment 6 – pin-up
Nov 12	HOLIDAY –in Remembrance of Remembrance Day		No Class
Nov 14	Term Break		No Class
Nov 19	Guest – TBD Storm Water Management: Methods and Applications (tentative)	Text, CH 11	
Nov 21	Assignment 6 progress presentations		Assignment 6 – pin-up
Nov 26	Work Day		
Nov 28	Guest – TBD Soils, Erosion and Sedimentation Control and Landscape Architecture	Text, CH 7 & 8	
Dec 3	Work Day		
Dec 5	Assignment 6 final presentations		Assignment 6 – DUE

Final Assignment 6 Documentation Due:

- Friday December 7 before the EVDS main office closes.
- All hardcopies to be turned in to EVDS main office.
- All digital files to be uploaded to D2L or e-transferred by 4:30pm.

* - Note: dates, lectures and guest speakers subject to change.

EVDL 603 Site Technology I: Grading & Landform

Means of Evaluation

EVDL 603 is a graded course. Incomplete (INC) and deferred term (DT) grades will be issued only for documented circumstances for which the student is clearly not able to complete the work due to significant illness, injury, etc. (please refer to Note #2 below). The course evaluation will be based on the assignments completed during the term. The basis for evaluation of each assignment issued will be present on the project brief. A passing grade is required for Assignment 7 in order to pass the course. There will be no final examination.

Preliminary Course Assignment List & Values

Assignment	Title	Value
1	Topography, Landform and Interpolation	12%
2	Developing Grading Plans for Terraces and Pads on Slopes	10%
3	Developing Grading Plans for Roadways and Parking Lots	15%
4	Developing a Grading Plan a House with a Swale	15%
5	Developing Grading Plans for Stairs, Ramps and Walls	15%
7	Comprehensive Grading Design	33%
Total		100%

Grading Scale

Final grades will be reported as letter grades, with the final grade calculated according to the 4-point range. Assignments will be evaluated by percentage grades, with their letter grade equivalents as shown.

Grade	Grade Point Value	4-Point Range	Percent	Description
A+	4.00	4.00	95-100	Outstanding - evaluated by instructor
A	4.00	3.85-4.00	90-94.99	Excellent - superior performance showing comprehensive understanding of the subject matter
A-	3.70	3.50-3.84	85-89.99	Very good performance
B+	3.30	3.15-3.49	80-84.99	Good performance
B	3.00	2.85-3.14	75-79.99	Satisfactory performance
B-	2.70	2.50-2.84	70-74.99	Minimum pass for students in the Faculty of Graduate Studies
C+	2.30	2.15-2.49	65-69.99	All final grades below B- are indicative of failure at the graduate level and cannot be counted toward Faculty of Graduate Studies course requirements.
C	2.00	1.85-2.14	60-64.99	
C-	1.70	1.50-1.84	55-59.99	
D+	1.30	1.15-1.49	50-54.99	
D	1.00	0.50-1.14	45-49.99	
F	0.00	0-0.49	0-44.99	

Notes:

- A student who receives a "C+" or lower in any one course will be required to withdraw regardless of their grade point average (GPA) unless the program recommends otherwise. If the program permits the student to retake a failed course, the second grade will replace the initial grade in the calculation of the GPA, and both grades will appear on the transcript.

EVDL 603 Site Technology I: Grading & Landform

Timely Completion of Projects

Unless agreed to by the Instructor on compassionate grounds, illness, or for reasons of academic accommodation (see note 2 below), assigned work that is handed in late will be penalized 10% of the total available grade per calendar day late (this includes weekends and holidays). Assignments more than two calendar days late will not be accepted and no credit will be given for them. Assignments must be handed in or presented during scheduled class hours.

Notes:

1. Written work, term assignments and other course related work may only be submitted by e-mail if prior permission to do so has been obtained from the course instructor. Submissions must come from an official University of Calgary (ucalgary) email account.
2. Academic Accommodations. Students who require an accommodation in relation to their coursework or to fulfil requirements for a graduate degree, based on a protected ground other than disability, should communicate this need, preferably in writing, to their Instructor or the designated contact person in EVDS, Jennifer Taillefer (jtaillef@ucalgary.ca). Students who require an accommodation unrelated to their coursework or the requirements for a graduate degree, based on a protected ground other than disability, should communicate this need, preferably in writing, to the Vice-Provost (Student Experience). For additional information on support services and accommodations for students with disabilities, visit www.ucalgary.ca/access/
3. Plagiarism - Plagiarism involves submitting or presenting work in a course as if it were the student's own work done expressly for that particular course when, in fact, it is not. Most commonly plagiarism exists when:(a) the work submitted or presented was done, in whole or in part, by an individual other than the one submitting or presenting the work (this includes having another impersonate the student or otherwise substituting the work of another for one's own in an examination or test),(b) parts of the work are taken from another source without reference to the original author,(c) the whole work (e.g., an essay) is copied from another source, and/or,(d) a student submits or presents work in one course which has also been submitted in another course(although it may be completely original with that student) without the knowledge of or prior agreement of the instructor involved. While it is recognized that scholarly work often involves reference to the ideas, data and conclusions of other scholars, intellectual honesty requires that such references be explicitly and clearly noted. Plagiarism is an extremely serious academic offence. It is recognized that clause (d) does not prevent a graduate student incorporating work previously done by him or her in a thesis. Any suspicion of plagiarism will be reported to the Dean, and dealt with as per the regulations in the University of Calgary Graduate Calendar.
4. Appeals: If a student has a concern about the course, academic matter, or a grade that they have been assigned, they must first communicate this concern with the instructor. If the concern cannot be resolved with the instructor, the student can proceed with an academic appeal, which normally begins with the Faculty: <http://www.ucalgary.ca/provost/students/ombuds/appeals>
5. Information regarding the Freedom of Information and Protection of Privacy Act (<https://www.ucalgary.ca/legalservices/foip>)
6. Emergency Evacuation/Assembly Points (<http://www.ucalgary.ca/emergencyplan/assemblypoints>)
7. Safewalk information (<http://www.ucalgary.ca/security/safewalk>)
8. Contact Info for: Student Union (<https://www.su.ucalgary.ca/contact/>); Graduate Student representative(<https://gsa.ucalgary.ca/about-the-gsa/gsa-executive-board/>) Student Union Wellness Centre: <https://www.ucalgary.ca/wellnesscentre/>; Library Resources: <http://library.ucalgary.ca/> and Student Ombudsman's Office (<http://www.ucalgary.ca/ombuds/>).
