Official Course Description

Introduction to physical landscapes and soils, emphasizing the formation and geographic distribution of mountains, volcanoes, valleys, and deserts, and their shaping by rivers and glaciers; and the fundamental concepts in soil science. Incorporates human modification of the Earth's surface.

Course Objectives

The primary objective of this course is to introduce and explain essential concepts of Earth surface and near-surface processes related to landforms and soils and their interactions with each other and the human environment.

Course Learning Outcomes

The Department of Geography is committed to student knowledge and skill development. The table below lists the key learning outcomes for this course, the program-learning outcomes to which they contribute, and the expected level of achievement.

Course Learning Outcomes	PLO(s)	Level(s)
Explain essential concepts in geomorphology, geology, soil science and hydrology.	2,7	1
Connect foundational knowledge of landforms and soils to aspects of human (land use, climate change etc.)	1,2,4	1
Communicate concepts in landforms and soils in scientific writing skills from primary sources.	7,8	1
Critically evaluate ideas/concepts in landforms and soils by integrating multiple information sources (eg. lectures, text books, peer-reviewed publications)	5,8	1
