Official Course Description

An introduction to the geographies of East and Southeast Asia utilizing the foundations of physical and human geography. The logical divisions based on culture, physiography, history, migration, social and economic both currently and historically. Issues of development and the environmental impacts relating to rapid growth, urbanization, and intensive use of resources will be addressed.

Course Objectives

This lecture course is an introduction to the geography of select regions of East and Southeast Asia. The approach emphasizes that geographical space can be conceptualized into regions which provides a logical division based on culture, physiography, history, migration, and social and economic experiences. At the same time, the course will emphasize issues of development and the environmental impacts relating to rapid growth and intensive use of resources in East and Southeast Asia. Further, this course will focus on regional differences and adaptations to the forces of globalization that is rapidly changing the human and environmental landscape. For example, thematic topics may include relevant subject matter such as the expansion of China's economy and power and its and current and historical influence and interests in East and Southeast Asia, and the environmental complexities and impacts of climate change in the region of focus. The course objectives emphasize current, historical, and physical variables and influences that make this region complex. Some lectures will be supplemented by group presentation and class discussions.
