| Total<br>(max. 65) |  |

SHOW ALL WORK. SIMPLIFY ALL ANSWERS AS MUCH AS POSSIBLE. NO CALCULATORS PLEASE.

THE MARKS FOR EACH PROBLEM ARE GIVEN TO THE LEFT OF THE PROBLEM NUMBER. TOTAL MARKS [65]. THIS EXAM HAS 8 PAGES INCLUDING THIS ONE.

[5] 1. Find  $\frac{d}{dx} \left( \frac{\cos^2 x - e^{3x}}{\sin x} \right)$ .

[5] 2. Find  $\frac{d}{dx} (x^{1/4} \ln(7 - 6x))$ .

[6] 3. USE THE DEFINITION OF DERIVATIVE to find  $\frac{d}{dx}(\sqrt{7x})$ .

[6] 4. Use implicit differentiation to find  $dy/dx$  where  $y^2 \tan(x + y^2) = 4x$ .

[8] 5. An object moves along the number line so that its position at any time  $t$  is given by

$$p(t) = \frac{3t - 4}{t^2 + 1}.$$

(a) Show that the velocity of the object at time  $t$  is given by  $v(t) = -\frac{3t^2 - 8t - 3}{(t^2 + 1)^2}$ .

(b) Find all times  $t$  when the velocity is zero.

(c) Find the acceleration of the object at time  $t = 0$ .

[9] 6. For the function  $f(x) = x(6 - x)^3$ ,  
(a) show that  $f'(x) = -2(6 - x)^2(2x - 3)$ .

Then find (b) the critical numbers; (c) the intervals of increase and decrease; (d) all local maxima and local minima.

[5] 7. For the function  $f(x) = \frac{x}{e^{2x}}$ , you are given that

$$f'(x) = \frac{1 - 2x}{e^{2x}} \quad \text{and} \quad f''(x) = \frac{4x - 4}{e^{2x}}.$$

Find the intervals on which  $f(x)$  is concave up and where it is concave down. Then find all points of inflection.

[5] 8. Find all constants  $k$  so that the function

$$f(x) = \begin{cases} \cos 3x & \text{if } x < 0, \\ (3 \cos x) + k & \text{if } x \geq 0 \end{cases}$$

is continuous at  $x = 0$ . Also, for each such value of  $k$ , determine whether  $f(x)$  is differentiable at  $x = 0$ .

[5] 9. Find and simplify  $\int \frac{(\ln x)^5}{x} dx$ .

[5] 10. Find and simplify  $\int_0^{\pi/2} (\sin x + 249 \cos x) dx$ .

[6] 11. Find the point on the curve  $y = \frac{4}{\sqrt{x}}$  which is closest to the origin  $(0, 0)$ .
