

Mathematics 249

Introductory Calculus

(see Course Descriptions for the applicable academic year: <http://www.ucalgary.ca/pubs/calendar/>)

## Syllabus

### Topics

- Algebraic Operations, Equations of lines
- Inequalities, signs of factored expressions
- Functions including the definitions and properties of absolute value, power, polynomial, rational, trigonometric, exponential, and logarithmic functions
- Composition of functions, Definitions and calculational methods for limits
- Horizontal and vertical asymptotes, Continuity
- Intermediate value theorem
- Derivative, definition and geometrical interpretation
- Derivative as rate of change; velocity and acceleration
- Rules of differentiation, differentiation formulas for power, trigonometric, exponential and logarithmic functions
- Chain rule, Implicit differentiation
- Linear approximation to a differentiable function
- Maxima and minima; extreme value theorem; mean value theorem
- Increasing and decreasing functions. Concavity.
- First derivative test; second derivative test
- Curve sketching
- Applied maximum - minimum problems
- Antiderivatives; integration formulas
- Area, Definite integral
- Fundamental theorem of calculus
- Integration by substitution
