

Instructions. You have 35 minutes to complete this quiz. Please provide detailed solutions for the exercises. Only complete answers with sufficient explanation are worth full credit. No open textbooks or notes are allowed.

1. [5 marks] Find a formula for $f^{-1}(x)$ and state the range and domain of $f^{-1}(x)$.

$$f(x) = 3x^2 + 5x - 2, \quad x \geq 0$$

$$y = 3x^2 + 5x - 2$$

$$3x^2 + 5x - (2+y) = 0$$

$$x = \frac{-5 + \sqrt{25 + 12(2+y)}}{6}$$

$$f^{-1}(x) = \frac{-5 + \sqrt{25 + 12(2+x)}}{6}$$

$$\text{range of } f^{-1}(x) : [0, \infty)$$

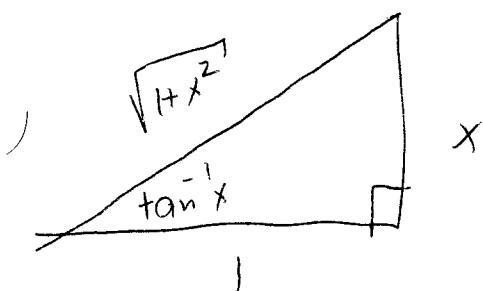

$$\text{domain of } f^{-1}(x) : [-2, \infty)$$

domain of $f(x)$: $[0, \infty)$
range of $f(x)$: $[-2, \infty)$
because $f'(x) \geq 0$ for $x \geq 0$.

2. [5 marks] Given that $\theta = \tan^{-1}(\frac{\sqrt{3}}{3})$ find the values of $\sin \theta$ and $\sec \theta$.

$$\sin(\tan^{-1} x) = \frac{x}{\sqrt{1+x^2}}$$

$$\cos(\tan^{-1} x) = \frac{1}{\sqrt{1+x^2}}$$

$$\begin{aligned} \sin \theta &= \sin(\tan^{-1}(\frac{\sqrt{3}}{3})) = \frac{\frac{\sqrt{3}}{3}}{\sqrt{1 + \frac{1}{3}}} = \\ &= \frac{\frac{\sqrt{3}}{3}}{\frac{2}{\sqrt{3}}} = \frac{1}{2} \end{aligned}$$

$$\begin{aligned} \cos \theta &= \cos(\tan^{-1}(\frac{\sqrt{3}}{3})) = \frac{1}{\sqrt{1 + \frac{1}{3}}} = \\ &= \frac{\sqrt{3}}{2} \end{aligned}$$

SOLUTION KE

UC ID: _____

3. [5 marks] Find $\frac{dy}{dx}$ by implicit differentiation.

$$\sin(x^2y^2) = x$$

$$\cos(x^2y^2)(2xy^2 + x^2 \cdot 2yy') = 1$$

$$y' 2x^2y \cos(x^2y^2) = 1 - 2xy^2 \cos(x^2y^2)$$

$$y' = \frac{1 - 2xy^2 \cos(x^2y^2)}{2x^2y \cos(x^2y^2)}$$

4. [5 marks] Solve the equation without a calculator.

$$\log_{10} x^{3/2} - \log_{10} \sqrt{x} = 5$$

$$\log_{10} \frac{x^{3/2}}{\sqrt{x}} = 5$$

$$\log_{10} x = 5$$

$$x = \underline{\underline{10^5}}$$
