 MATH 353-02  
 Quiz #5T(3pm)

Winter 2008

Name: \_\_\_\_\_ I.D.#: \_\_\_\_\_

1. Evaluate  $\iint_S y^2 z \, dS$  and  $S$  is the part of the cone  $z = \sqrt{y^2 + x^2}$  between two planes  $z = 1$  and  $z = 2$ . [3]

2. Find  $\iint_S \mathbf{F} \bullet d\mathbf{S}$  where  $\mathbf{F}(x, y, z) = (xz, 1 + 2(y - 4)z, 2x^2 + 3y^2 + z^2)$  and  $S$  is the part of the vertical sheet  $y = 4 - x^2$ , ( $z$  any) below the plane  $5x + 3y + z = 15$  in the first octant oriented in the direction of positive x-axis. [4]

3. For  $\mathbf{F}(x, y, z) = (\sin(x^2 z + y^2), \ln(\frac{x^2 + y^2}{z}), xz)$  find  $\text{div } \mathbf{F}$  and  $\text{curl } \mathbf{F}$  for  $z > 0, (x, y) \neq (0, 0)$ . [3]

**SOLUTION**

**For 1)**

$S$  is given by  $z = \sqrt{x^2 + y^2}$  for  $(x, y) \in D = \{1 \leq x^2 + y^2 \leq 4\}$

$$\mathbf{n} = \left( \frac{x}{\sqrt{x^2 + y^2}}, \frac{y}{\sqrt{x^2 + y^2}}, -1 \right) \quad \|\mathbf{n}\| = \sqrt{\frac{x^2 + y^2}{x^2 + y^2} + 1} = \sqrt{2}$$

$f$  on  $S$

$$\iint_S y^2 z \, dS = \sqrt{2} \iint_D y^2 \sqrt{x^2 + y^2} \, dx dy = (\text{by polar.coord.})$$

$$= \sqrt{2} \int_0^{2\pi} \int_1^2 r^2 \sin^2 \theta \, r^2 dr d\theta = \sqrt{2} \int_0^{2\pi} \frac{1 - \cos 2\theta}{2} \, d\theta \int_1^2 r^4 dr = \sqrt{2} \pi \left( \frac{2^5}{5} - \frac{1}{5} \right) = \frac{31}{5} \sqrt{2} \pi.$$

**For 2)**

below  $\rightarrow 0 \leq z \leq 15 - 5x - 3y$

$S$  is a part of vertical surface  $\rightarrow$  parametrization

we can choose  $x = u \quad y = 4 - u^2 \quad z = v$

$\mathbf{r}(u, v) = (u, 4 - u^2, v)$  for  $u \in [0, 2]$  and  $0 \leq v \leq 3 - 5u + 3u^2$

$$\frac{\partial \mathbf{r}(u, v)}{\partial u} = (1, -2u, 0) \quad \frac{\partial \mathbf{r}(u, v)}{\partial v} = (0, 0, 1)$$

cross product  $\mathbf{n} = +(2u, 1, 0)$  - positive x-axis

$\mathbf{F}$  on  $S$   $\mathbf{F}(x, y, z) = (uv, 1 - 2u^2v, \dots)$  and  $\mathbf{F} \bullet \mathbf{n} = 1$

$$\begin{aligned} \iint_S \mathbf{F} \bullet d\mathbf{S} &= \iint_D \mathbf{F} \bullet \mathbf{n} \, dudv \text{ where } D \{(u, v); u \in [0, 2], 0 \leq v \leq 3 - 5u + 3u^2\} \\ &= \int_0^2 \left( \int_0^{3-5u+3u^2} dv \right) du = \int_0^2 (3 - 5u + 3u^2) du = 6 - \frac{5}{2} \cdot 4 + 8 = 4. \end{aligned}$$

**For 3)**

$$\operatorname{div} \mathbf{F} = \partial_x (\sin(x^2z + y^2)) + \partial_y \ln\left(\frac{x^2 + y^2}{z}\right) + \partial_z(xz) = 2xz \cos(x^2z + y^2) + \frac{2y}{x^2 + y^2} + x$$

$$\begin{aligned} \operatorname{curl}(\mathbf{F}) &= \begin{vmatrix} + & - & + \\ \partial_x & \partial_y & \partial_z \\ \sin(x^2z + y^2) & \ln\left(\frac{x^2 + y^2}{z}\right) & xz \end{vmatrix} = \\ &= \left( -\frac{1}{z}, -z + x^2 \cos(x^2z + y^2), \frac{2x}{x^2 + y^2} - 2y \cos(x^2z + y^2) \right) \end{aligned}$$
