

STATISTICS 407 "APPLIED PROBABILITY"

Calendar Description: H(3-1T)

Markov chains. Limit distributions for ergodic and absorbing chains. Classification of states, irreducibility. The Poisson process and its generalizations. Continuous-time Markov chains. Brownian motion and stationary processes. Renewal theory. Introduction to basic simulation methods.

Prerequisite: Mathematics 321.

Suggested Text: "Introduction to Probability Models", sixth edition, by S. Ross, Academic Press.

The topics below correspond to Sections 2.8, 4.1-4.6, 5.3-5.4, 6.1-6.5, 6.8, 10.1-10.4, 11.2-11.5 in the text by Ross.

Syllabus

<u>Topics</u>	<u>Number of hours</u>
Markov Chains. Classification of states, irreducibility, limit theorems.	5
Absorbing chains. The number of steps to absorption, its mean and variance. The probability of absorption in various states. Generating function techniques on vectors and matrices.	9
Renewal theory. Ordinary and alternating renewal processes. Laplace transform techniques.	3
Poisson processes and generalizations, Continuous-time Markov chains.	10
Brownian motion and stationary processes. Simulation methods.	8
TOTAL HOURS	35
