Consulting

Consulting activities since 2003 typically included providing statistical advice on study design, power and sample size calculations, selection of methods of analysis, presentation of results, data analysis and creation of figures for manuscripts and presentations. There were very few opportunities for publications, and these projects rarely generated research ideas for my research program.

2011 - present	Meet with 3-6 cancer researchers annually, which involved 10-15% of my time.
2007 - 2010	Met with over 20 cancer researchers, which involved 30% of my time. I spent an average of 1 day per week on one client's projects, which will likely not result in any publications.
2004 - 2006	Developed and managed a Statistical Consulting Unit in the Department of Oncology. My role included supervision of a Statistical Associate (B.Sc.), who carried out the work under my direct supervision. I also developed policies related to students, authorship, and cost-recovery. In addition, with the help of the Statistical Associate, we developed the database used to track projects and generate client reports and invoices. These policies, forms and databases continue to be used by this Unit. My consulting time commitment (40-50% of my time) substantially increased for this three-year time period. The number of clients was more than 30.
2003	Met with 15 cancer researchers which involved 20% of my time.

VIII. RESEARCH SUPPORT

i. Peer-reviewed funded research

Team Grants

One of the 11 projects funded in our team grant renewal was a statistical methods working group, which includes several colleagues from the University of Toronto and myself.

- 2006/7 - 2011/6 McLaughlin J (PI), Parfrey PS, Younghusband HB, Gallinger S, Wang PP, Green C, Cotterchio M, Holowaty E, Esplen MJ (CoIs). **Kopciuk KA** (Collaborator) Interdisciplinary research on the determinants and impact of colorectal cancer: Molecular-genetic factors, risk modifiers and population health, CIHR, \$4,951,888 Operating Grants

(Principal or Co-Principal Investigator)

Statistical methodological research in Canada is mainly funded through NSERC. Other agencies such as CIHR and the Pacific Institute for the Mathematical Sciences provide rare, limited opportunities for funding statistical methods development. For instance, my successful 2003 CIHR grant was a genetic epidemiology RFA that was only available twice.

(Co- Investigator)

My responsibilities in collaborative projects include sample size calculations and data analysis plans for the proposals, and supervision for the analyses of collected data. I perform more complex analyses myself. The collaborative grants are distinct from grants where I had a service role in two critical ways: (1) a proportion of the budgets are for my own methodological research, as it is very difficult to obtain funding for statistical methods research from most grant agencies; and (2) these projects stimulate new research ideas for my own methodological research program.
