Course Description: Issues in philosophy and psychology converge and overlap. We will survey a number of such issues, with the aim of introducing students to key topics in philosophy of mind and philosophy of psychology. Our topics will include reductionism, functionalism, and artificial intelligence, among others.

Course Learning Outcomes

Students who complete this course will have a grasp of some of the key theoretical issues that underlie the philosophical study of the mind. This will give them the tools to understand a large swath of contemporary work in cognitive science. Students will also be required to write a series of exams and papers in which they interpret and analyze complex ideas and arguments.

REQUIRED READINGS

Course readings will be available via D2L.
