COURSE OBJECTIVES/LEARNING OUTCOMES

The objective of this course is to explore how social statuses, neighborhoods and social networks shape health. After completing this course, students will be familiar with theoretical and methodological tools sociologists use to study health effects of these social contexts. They will know how physical health and mental health are distributed across social strata defined by class, gender, race, ethnicity, and age. They will understand the ways in which characteristics of the neighborhoods where individuals live and characteristics of the social networks in which individuals are embedded shape their physical and mental health. They will be able to link basic research on social contexts and health to ongoing efforts to develop efficient and effective interventions to improve health and reduce health inequalities.

COURSE DESCRIPTION

Part I addresses what sociology brings to the return to social context in the health arena. Part II focuses on social statuses as positions in a social hierarchy, exploring links between class and health, gender and health, race, ethnicity and health and age and health. Part III discusses the neighborhood-health connection. Social networks and health are discussed in Part IV. Part V moves beyond basic research on social contexts and health to address policy implications.
